ModernUI Calculator is a Metro application with large buttons you can click or tap on touch-supported devices to perform standard mathematical operations in a user-friendly interface. It comes in handy to those whose built-in Windows Calculator is faulty and don't have an active Internet connection. Also, it can be used by people with imperfect eyesight, since its big buttons are hard to miss. Can be installed from the Windows Store The tool is trusted by Microsoft as far as security is concerned. Therefore, it can be downloaded and installed only from the Windows Store. The math calculator is compatible with Windows 8, 8. systems, and can be pinned to your Start Screen or Menu to run it quickly like any other Metro app. Metro-style calculator with basic math operations The main window has a dark theme, making ModernUI Calculator ideal to use at night time. On the other hand, there is no light theme available. When it comes to supported operations, you can perform addition, subtraction, multiplication and division, use memory functions, raise a number of power, find the square root and reciprocal of a number, as well as clear the screen to make new calculations. Doesn't support the keyboard or full expressions Commands can be sent to the standard calculator only by clicking the buttons, since the keyboard isn't supported. Furthermore, full expressions aren't supported, which means that numbers disappear from the screen as soon as you enter new ones. Also, operations are not displayed in the calculator after pressing their buttons. Simple and straightforward calculator for everyday use Taking everything into account, ModernUI Calculator comes wrapped in a user-friendly interface for performing basic math calculations in a Metro-style tool. However, it doesn't feature support for scientific operations, such as trigonometry, factorial, combinations, permutations, logarithms, and others. More... JQMath is a JavaScript library for creating mathematical expressions. JQMath is a JavaScript library for creating mathematical expressions. It is modeled after the original MathML standard. JQMath is one of the first JavaScript math libraries ever to be written. It took me many months to finally get it right. JQMath works fine on any browser that supports MathML, and any browser that does not can be configured to handle MathML via Internet Explorer's JavaScript Object Model (JSOM). While the original MathML standard is designed to be a strictly markup language, the JQMath object model may
